VRH-3 and VRH-3D Valve

The success of this valve consists in keeping a homogeneous water level, maximizing its availability without any electrical or mechanical gadget.

With VRH-3 and VRH-3D the installation and handling are the most plug and play possible to provide the farmer with secure functioning.

As minor minimum pressure is required, more valves can be installed in the same circuit.

Rotecna manufactures 2 models of valve: **VRH-3 and VRH-3D**.

VRH-3:

- Multi-directional connection.
- Water supply tap at the back.

VRH-3D:

- Direct connection.

VRH-3 and VRH-3D VALVE

Easy opening. No tool required.

Optimized membrane.

Fast down pipe connection.

With VRH-3 and VRH-3D the installation and handling are the most plug and play possible to provide the farmer with secure functioning.

As minor minimum pressure is required, more valves can be installed in the same circuit.

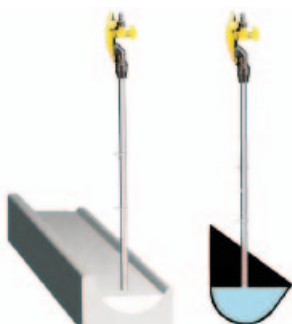

Rotecna manufactures 2 models of valve: VRH-3 and VRH-3D.

VRH-3 has multi-directional water entrance and a tap at the back to open or close the water supply.

VRH-3D (direct connection) allows a direct connection to the water line and is provided with water filter of the general line.

FEATURES AND ADVANTAGES:

- Its membrane guarantees a perfect watertight seal.
- Fast down pipe connection, the pipe does not require tools.
- Works with lower water pressure (minimum 0.5 bar pressure).
- Easy opening: manual opening and closing. No tool required.
- Its works without any electrical or mechanical gadget.
- Out of reach of the animals.

APPLICATION:

Used in farrowing, gestation, weaning and finishing.

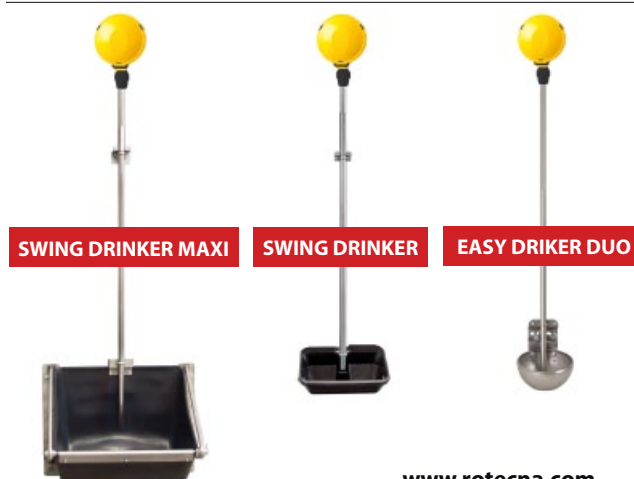

VRH-3 / VRH-3D

TECHNICAL DATA

Nº animals		1-20
Pressure, bar	min.	0,5
	max.	2,5
Volume, L/min.	min.	1,8
	max.	3,6-4,2

Manufactured by: Rotecna.s.a.
